</tbody>
</table>

*Use of illness in data aggregation for cases other than STD or TB (since Jan-2013) causes changes in cases reported from previous released reports. Numbers are provisional including confirmed, probable, and suspect cases that are reportable to CDC. HIV/AIDS/TB case counts are provided on a quarterly basis. Data suppression denoted by ‘.’ Applies if number of cases < 5.

~Diseases not reported in the past five years (aggregate data) and not reported during the current reporting period are not included in this report.

~Confidence intervals (not shown) for the quarterly disease incidence rates provided a basis for an informal statistical test to determine if the current quarterly rates changed significantly from those of the previous 5-year aggregated rates. Green text represents rates that decreased significantly, whereas red text represents rates that increased significantly. Statistically significant changes are indicated by 'X.'
