

Southern Nevada Health District Weekly Influenza Surveillance Snapshot

MMWR WEEK 45

2025–2026 Season

SNHD Office of Epidemiology

Influenza surveillance for Clark County, Nevada includes data collected from local acute care hospitals and other healthcare providers. In Clark County, as of November 08, 2025, for the 2025–2026 influenza season, 26 influenza-associated hospitalizations were reported. Currently, there has been a single death associated with influenza reported for the season. The percentage of emergency room (ER) and urgent care clinic visits for influenza-like illness [ILI (fever plus cough or sore throat)] increased from 1.7% in week 44 to 1.9% in week 45. Currently, Influenza A has been the predominant Influenza Type detected among hospitalized cases within Clark County. The Southern Nevada Health District (SNHD) will continue to update the public on the progression of the influenza season and encourage influenza vaccination for all persons 6 months of age and older without contraindications.

*Please note that due to the government shutdown certain data elements of this report provided by the Centers for Disease Control and Prevention are not currently available. These elements will be restored once available.

Table 1: Influenza Report by Age Group — Clark County, NV (CDC Week 40, 2025 to Week 45, 2025)

Age Group	Hospitalized	Hospitalized Deaths	Non-Hospitalized Deaths	Confirmed Cases
0-4	1	0	0	1
18-24	1	0	0	1
25-49	7	0	0	7
50-64	4	0	0	4
65+	13	1	0	13
Total	26	1	0	26

Data source: SNHD EpiTrax Warehouse

Note: This report does not include cases diagnosed by Rapid Influenza Diagnostic Test without hospitalization.

The total number of confirmed influenza cases is determined by taking the sum of hospitalizations and Deaths W/O hospitalization history.

Table 2: Influenza Report by Virus Strain — Clark County, NV (CDC Week 40, 2025 to Week 45, 2025)

Influenza Type	Hospitalized	Deaths	Confirmed Cases
Influenza A (RIDT)	6	1	6
Influenza A (not sub-typed)	9	0	9
Influenza B (RIDT)	8	0	8
Influenza B (non-RIDT)	3	0	3
Total	26	1	26

Data source: SNHD EpiTrax Warehouse

Confirmed Cases are defined as a case that meets laboratory criteria AND had a hospitalization (>24 hours) or has died.

In rare instances where both Influenza A and B were detected for the same individual, the case is counted under both virus types. Totals therefore represent laboratory detections rather than unique persons.

Figure 1: Percentage of Clark County Deaths Registered with Pneumonia and/or Influenza (P&I) by Week for Three Prior Influenza Seasons*

Data Source: Clark County Electronic Death Registry System

*Please note that due to a delay in receiving ICD codes for existing death records in the current season, the data reflected in the image above may not correspond to the true number of deaths attributed to Pneumonia and or Influenza.

Figure 2: Distribution of Influenza Cases by Virus Strain — Clark County, NV (CDC Week 40, 2025 to Week 45, 2025)

Data Source: SNHD EpiTrax Warehouse

*Counts represent laboratory detections. In rare cases, individuals testing positive for both Influenza A and B are included under both virus types.

Data for MMWR Week 45 is not currently available

Additional Notes:

Confirmed Cases = Laboratory confirmed by PCR, culture, immunofluorescent antibody staining (direct or indirect), IHC antigen staining, rapid influenza diagnostic tests (RIDTs) with hospitalizations for 24 hours or longer, or with deaths. This weekly report is only a reflection of the hospitalized cases and deaths reported for the current influenza season (Table 1 and Table 2). The number of total confirmed cases in Figure 5 includes number of hospitalizations, deaths with hospitalizations and deaths without hospitalizations.

Note: The total number of confirmed cases presented in this report is subject to changes due to possible delays in reporting and processing.
