

HACCP Worksheet - Cook Chill Sample

| Critical Control Point (CCP) | | Cooking |
|------------------------------|-----------|--|
| Criti | cal Limit | Beef 145°F for 15 seconds |
| | | Chicken 165°F for 15 seconds |
| | | Pork 155°F for 15 seconds |
| | | Seasonal vegetables 135°F for 15 seconds |
| Monitoring | Who | Food handler is responsible for monitoring cooking times and temperatures |
| | How | Cooking temperatures will be monitored by measuring internal temperatures with a probe thermometer |
| Σ | Frequency | Cooking temperatures will be monitored at least once per batch |
| Corrective Action | | If products do not meet the required cooking temp/time, continue cooking until required time and internal temperature are met |
| Verification | | Chef is responsible for verification of cooking and bagging logs at least once daily |
| Records | | Cooking time and temperature will be documented on the cooking and bagging log and will be maintained on site for at least 6 months. |

| Critical Control Point (CCP) | | Bagging |
|------------------------------|-----------|--|
| Critical Limit | | Ensure food is bagged at temperature of ≥135°F |
| Monitoring | Who | Food handler is responsible for monitoring bagging temperatures |
| | How | Bagging temperatures will be monitored by measuring internal temperatures with a probe thermometer |
| | Frequency | Bagging temperatures will be monitored by taking temperatures of the final bag of each batch |

| Corrective Action | If product temperature is <135°F during bagging, reheat all bagged product to 165°F within 2 hours. Reheating can only be done once. Any product that cannot be reheated must be discarded or if product has already been reheated once and the product temperature drops below 135°F during bagging, the product must be discarded. |
|-------------------|---|
| Verification | Chef is responsible for verification of cooking and bagging logs at least once daily |
| Records | Bagging temperature will be documented on the cooking and bagging log and will be maintained on site for at least 6 months. |

| Critical Control Point (CCP) | | Cooling |
|------------------------------|-----------|--|
| Critical Limit | | Cooling from 135°F to 41°F within 6 hours total time, including 135°F to 70°F within 2 hours. Continue cooling from 41°F to 34°F within 48 hours. |
| Monitoring | Who | Food handler is responsible for monitoring cooling temperatures |
| | How | Cooling temperatures will be monitored by folding a bag over the probe thermometer |
| | Frequency | Cooling temperatures will be monitored hourly from 135°F to 41°F Cooling temperatures will continue to be monitored from 41°F to 34°F at 48 hours from the time the product reached 41°F |
| Corrective Action | | If temperature is >70 °F and > 2 hours into cooling, discard product If temperature is >41 °F and >6 hours into cooling, discard product If product temperature >34°F and >48 hours from reaching 41°F but product met cooling to 41°F within 6 hours, the product can be removed from ROP and labeled |
| | | for 7 days from time the product was bagged |
| Verification | | Chef is responsible for verification of cooling logs at least once daily |
| Records | | Cooling time/ temperature will be documented on cooling log and will be maintained on site for at least 6 months |

| Critical Control Point (CCP) | Cold Holding ROP product at processing facility and outlet facilities |
|------------------------------|---|
| | |

| Critical Limit | | Cold holding temperature at 34°F, then at 41°F when removed from 34°F |
|----------------|---------------|--|
| Monitoring | Who | Food handler is responsible for monitoring cold holding temperatures |
| | How | Cold holding temperatures will be monitored by checking the external refrigeration temperature gauge against the data from the continuous electronic monitoring |
| Σ | Frequency | Cold holding temperatures will be monitored at least twice daily |
| Corr | ective Action | If ambient refrigeration temperatures >34°F, repair unit and measure food temperatures by folding bags over probe thermometer. |
| | | Relocate food with temperatures at 34°F or below to operable unit equipped with continuous electronic monitoring. |
| | | For food with temperatures >34°F but <41°F, relocate food to refrigeration holding at 41°F and re-label food for up to a 72-hour shelf life from the last known temperature of 34°F. |
| | | If food temperatures are >41°F, discard food. |
| Verification | | Chef is responsible for verification of refrigeration logs and continuous electronic monitoring at least once daily |
| Records | | Cold holding temperature (from external gauge) will be documented on refrigeration log at least twice daily and will be maintained on site for at least 6 months |
| | | If applicable specify how often continuous electronic monitoring data will be downloaded (i.e. daily, weekly, etc.) |
| | | Continuous electronic monitoring data will be maintained on site for at least 6 months |

| Critical Control Point (CCP) | | Cold Holding ROP product at processing facility and outlet facilities |
|------------------------------|-----|--|
| Critical Limit | | Shelf life 30 days if holding at 34 °F or 72 hours if product previously held at 34 °F is moved to 41°F. |
| Monitorin | Who | Food handler is responsible for monitoring shelf life |
| | How | Monitor shelf life by checking labels |

| Frequency | Monitor shelf life by checking labels daily |
|-------------------|---|
| Corrective Action | If food has been held for >30 days at 34°F, discard. If food has been held for >72 hours at 41°F, discard. |
| Verification | |
| Records | Monitoring shelf life (labels) will be documented on the Food Safety Checklist and will be kept on site for at least 6 months |

| Critical Control Point (CCP) | | Reheating (Required if reheating in ROP) |
|------------------------------|-----------|--|
| | | Note: Reheating is not required if packaging and reheating for individual service only |
| Critical Limit | | Food will be reheated to 165°F for at least 15 seconds within 2 hours |
| βι | Who | Food handler is responsible for monitoring reheating time/ temperatures |
| Monitoring | How | Reheating temperatures will be monitored by folding bag over probe thermometer |
| Mo | Frequency | Reheating temperatures will be monitored at least once per batch |
| Corrective Action | | If food temperature is <165°F and <2 hours continue reheating until required time and internal temperature met. |
| | | If food temperature is <165°F and >2 hours, discard food. |
| Verification | | Chef is responsible for verification of reheating logs at least once daily |
| Records | | Reheating times/ temperatures will be documented on reheating log and will be maintained on site for at least 6 months |
