SOUTHERN NEVADA HEALTH DISTRICT MONTHLY ARBOVIRUS UPDATE

Clark County, NV.

In effort to keep Clark County residents and visitors safe and aware of the arboviruses currently affecting the area, the Southern Nevada Health District (SNHD) will issue a monthly arbovirus update. SNHD conducts routine surveillance for arboviruses in mosquitoes and arboviral disease in humans. SNHD's Mosquito Control program monitors the local mosquito population for arboviruses such as West Nile Virus (WNV), St. Louis Encephalitis Virus (SLEV), and Western Equine Encephalitis Virus (WEEV). In addition to monitoring mosquitoes for arboviruses, the program also provides information on the type of mosquitoes present in the area. This information is important, especially when faced with emerging diseases such as Zika.

Arboviral diseases in humans are reportable to SNHD's Office of Acute Communicable Disease Control (ACDC). Currently, WNV and SLEV are the only locally acquired arboviral diseases that have been reported. ACDC sporadically investigates travel-associated cases of dengue, chikungunya, and Zika virus.

West Nile Virus

WNV is a potentially serious but preventable illness most often spread by the bite of an infected mosquito. It is the leading cause of mosquito-borne disease across the United States.

Mosquitoes become infected when they feed on infected birds. WNV can infect humans, birds, mosquitoes, horses, and some other mammals. It is not transmitted from person-to-person.

According to the Centers for Disease Control and Prevention (CDC), about 1 in 5 people who are infected develop a fever and other symptoms. About 1 out of 150 infected people develop serious, sometimes fatal, illness.

The most effective way to prevent arboviral infections, such as WNV, is to prevent mosquito bites and eliminate standing water.

For additional resources and information about WNV and how to prevent infection, go to the CDC's West Nile Virus [website](#).

Reported WNV cases in Clark Co., NV by year

InfectionType	Year2019	Year2020	Year2021	Year2022	Year2023
WNV-Non neuroinvasive	9	1	0	0	0
WNV-neuroinvasive	34	0	0	0	0

WNV Activity

ACDC currently has zero active WNV investigations. In 2023, ACDC has conducted zero WNV investigations.

SLEV Activity

ACDC currently has zero active SLEV investigations. In 2023, ACDC has conducted zero SLEV investigations.

WEEV Activity

ACDC currently has zero active WEEV investigations. In 2023, ACDC has conducted zero WEEV investigations.

Zika Virus Activity

ACDC currently has zero active Zika investigations. In 2023, ACDC has conducted zero Zika investigations.

Mosquito Surveillance

In 2023, SNHD Environmental Health has set 1412 traps throughout Clark County and submitted 870 sample pools*, representing 10375 mosquitoes, to the Southern Nevada Public Health Lab (SNPHL) for arboviral analysis. Of these sample pools submitted, 2 tested positive for WNV, and 0 tested positive for SLEV.

Mosquito Sampling 2023

SLEV

Total Mosquitoes Submitted	Total Sample Pools Submitted	Total Sample Pools SLEV +	Total Mosquitoes in SLEV + Sampled Pools	ZIP Codes identified with SLEV
10,375	870	0	0	0

WNV

Total Mosquitoes Submitted	Total Sample Pools Submitted	Total Sample Pools WNV +	Total Mosquitoes in WNV + Sampled Pools	ZIP Codes identified with WNV
10,375	870	2	88	1

WEEV

Total Mosquitoes Submitted	Total Sample Pools Submitted	Total Sample Pools WEEV +	Total Mosquitoes in WEEV + Sampled Pools	ZIP Codes identified with WEEV
10,375	870	0	0	0

*A sample pool is defined as a collection of 50 or less female mosquitoes, from the same species and location, combined into a vial for testing.

WNV Positive Mosquito Identified ZIP Codes:

89074

SLEV Positive Mosquito Identified ZIP Codes:

None

SNHD urges residents to drain standing water around their homes each week, no matter how small the amount. Residents and visitors should use repellents when enjoying the outdoors. Residents are also encouraged to report mosquito activity, especially day-biting mosquitoes to the Mosquito Surveillance Program at (702) 759-1633.
